

Suggested Use

# Pasture Blends

## Western Prime

FEATURES

- A premium blend of annual tetraploid and perennial ryegrass with high quality clovers.
- High production blend ideal for grazing and hay production
- Mid Maturity and Perennial
- Ideal to establish pastures for oversowing run down pastures providing good seedling vigour to out compete weeds and give early feed
- Suited to 500ml plus rainfall to capitalise on spring growing conditions with its blend of annual and perennial ryegrass.
- Gaucho and Poncho Plus treatment options available

AREA OF ADAPTION

Medium to High rainfall zones.

SOIL TYPE

Western Prime is well adapted to a wide range of fertility levels and soil types. Tetraploid annuals will cope with short term waterlogging provided the growth tip is above water. To maximise stand productivity soil testing is advisable via NutriScription. Analyse soil and neutralise deficiencies with fertiliser and/or lime.

INOCULATION

Sow with Group C granular legume inoculant from BASF or Alosca to maximise the nitrogen fixation of the clover species.

SEED MIX

Western Prime	
Ryegrass 80%	Clovers 20%
Attain (Mid Tetraploid) Roper (Perennial Ryegrass)	Trikkala sub clover Paradana balansia Arrowleaf clover

SOWING

Sow at 20-25kg/ha. Sow seed no deeper than 1cm in a fine but firm seed bed. Sow into bared ground if direct drilling. Lightly harrow and roll to improve germination. Suitable for oversowing into an established stand. Pasture productivity is directly related to successful plant establishment.

TREATING

Apply Poncho Plus or Gaucho to have a proactive approach to pest control. Seed insecticide treatments will maximise stocking rates from sowing as quickly as possible and protect beneficial species. Choose either to treat the entire blend or clovers only.
